FOR IMMEDIATE RELEASE

New Weber 404 Slicing System provides new levels of performance and flexibility to mid-volume processors.

Weber's compact new 404 Slicing System is designed to provide mid- and lower-volume processors with many of the same productivity and presentation features previously available only to high volume processors.

The innovative new Model 404 combines the advantages of gripper feed control with the productivity enhancements of a continuous feed system. Throughput is enhanced by a circular blade speed of 600 RPM, as well as the capacity to handle multiple 48-inch logs through the 10-inch wide throat.

Also new is Weber's Up & Down Technology, providing 404 users the ability to stack sliced products up to 80 mm in height.

Touch-screen controls allow Weber 404 operators to instantly choose between seven popular presentation styles and electronically adjust slice thickness from 0.5 to 50 mm. The new 404 is designed work in concert all major brands of packaging machinery.

A wide array of Weber options is available to customize the 404 to product specific tasks. A fully automatic infeeder and an accurate checkweigher help trim labor costs and speed production. The industry's most efficient interleaver, capable of two-lane stacked and shingled presentations, is also available on the 404.

Weber manufactures a complete line of high-tech slicing machinery, as well as a wide variety of skinners, derinders and ice machines. Founded in 1981, Weber operates three manufacturing facilities in Germany, as well as the North American Technology Center and demonstration facility in Kansas City, MO.

Interested producers may contact the Weber, Inc sales office at **1-800-505-9591** or by email at usasales@weberslicer.com. Additional Model 404 details are available on the company's web site at www.weberslicer.com.
