**FOR IMMEDIATE RELEASE**

## **New Weber Robotics help improve food safety, reduce labor costs and speed production.**

Weber, Inc. the world's leading supplier of high volume slicing systems, has introduced new Food Robotics intended to help processors further automate food handling for greater sanitation and productivity.

Flexible in performance and space saving in design, new Weber Food Robotics can provide solutions within a wide variety of specific applications. Current uses include the precise placement of sliced meat portions onto sandwich breads and pizza, as well as accurate overlapping and placement of different meats into a single presentation for packaging.

Weber Robotics are also being used to virtually eliminate product handling by humans, providing food meat and cheese processors an extra measure of food safety. Significant labor savings can also be demonstrated.

Weber Food Robotics can be customized to satisfy a variety of complex tasks, serving both single and multiple slicing systems. Weber engineers have designed the system to work with all major lines of packaging equipment, using straight in-feed or with product turned 90 degrees.

A video of Weber Food Robotics in action is available on the company's web site at [www.weberslicer.com](http://www.weberslicer.com).

Weber manufactures a complete line of high-tech slicing machinery, as well as a wide variety of skidders, derinders and ice machines. Founded in 1981, Weber operates three manufacturing facilities in Germany, as well as the North American Technology Center and demonstration facility in Kansas City, MO.

The full array of new Weber machinery will be on display this October 24-27 at the World Wide Food Expo in Chicago's McCormick Place, Booth N2232 – North Hall.

Interested producers may contact the Weber, Inc sales office at **1-800-505-9591** or by email at [usasales@weberslicer.com](mailto:usasales@weberslicer.com)
